1. Determine whether the series converges or diverges. Explain.

\[ \sum_{n=0}^{\infty} \frac{n^2 + 4}{n^5 + 1} \text{ converges by the Limit Comparison Test, by comparing to } \]

\[ \sum_{n=1}^{\infty} \frac{1}{n^3} \text{, which converges by the } p \text{-series test} \]

with \( p = 3 > 1 \) (or by the integral test),

\[ L = \lim_{n \to \infty} \left( \frac{\frac{n^2 + 4}{n^5 + 1}}{\frac{1}{n^3}} \right) = \lim_{n \to \infty} \left( \frac{n^5 + 4n^3}{n^5 + 1} \right) = \]

\[ \lim_{n \to \infty} \left( 1 + \frac{\frac{4}{n^2}}{\frac{1}{n^5}} \right) = \frac{1 + 0}{1 + 0} = 1 \]

or use L'Hôpital's Rule,

\[ \lim_{x \to \infty} \left( \frac{x^5 + 4x^3}{x^5 + 1} \right) = \infty = \lim_{x \to \infty} \left( \frac{5x^4 + 12x^2}{5x^4} \right) = \]

\[ \lim_{x \to \infty} \left( 1 + \frac{\frac{12}{5x^2}}{\frac{1}{x^2}} \right) = 1 + 0 = 1 \]
2. Determine whether the series converges or diverges. Explain.

\[ \sum_{n=1}^{\infty} \frac{\sin(n)}{5^n} \text{ converges since it absolutely converges.} \]

The associated positive series

\[ \sum_{n=1}^{\infty} \left| \frac{\sin(n)}{5^n} \right| \text{ converges by the Comparison Test;} \]

\[ |\sin(n)| \leq 1 \text{ so } \left| \frac{\sin(n)}{5^n} \right| \leq \frac{1}{5^n}. \]

Note that \[ \sum_{n=1}^{\infty} \frac{1}{5^n} \text{ converges since it is a geometric series with ratio } r = \frac{1}{5} < 1. \]
3. Find the interval of convergence of the power series.

\[
\sum_{n=0}^{\infty} \frac{2^n}{n+1} (x-1)^n \text{ converges for } \frac{1}{2} < x < \frac{3}{2}.
\]

**Ratio Test**

\[
\rho = \lim_{n \to \infty} \left| \frac{\frac{2^{n+1}}{n+2} (x-1)^{n+1}}{\frac{2^n}{n+1} (x-1)^n} \right| = \lim_{n \to \infty} \left| \frac{2 + \frac{2}{n}}{1 + \frac{2}{n}} (x-1) \right| = |2(x-1)|.
\]

Then \(|2(x-1)| < 1 \text{ for } -1 < 2x-2 < 1\),

\[1 < 2x < 3 \quad \frac{1}{2} < x < \frac{3}{2}.\]

**Check endpoints:** If \(x = \frac{3}{2}\), \(x-1 = \frac{1}{2}\); series is

\[
\sum_{n=0}^{\infty} \frac{2^n}{n+1} \left(\frac{1}{2}\right)^n = \sum_{n=0}^{\infty} \frac{1}{n+1} = 1 + \frac{1}{2} + \frac{1}{3} + \cdots; \text{ is the harmonic series which diverges by the p-series test } (p=1).
\]

If \(x = \frac{1}{2}\), \(x-1 = -\frac{1}{2}\);

\[
\sum_{n=0}^{\infty} \frac{2^n}{n+1} \left(-\frac{1}{2}\right)^n = \sum_{n=0}^{\infty} \frac{(-1)^n}{n+1} = 1 - \frac{1}{2} + \frac{1}{3} - \frac{1}{4} + \cdots; \text{ the alternating harmonic series which converges by the Leibniz Test (note } \frac{1}{n+1} > \frac{1}{n+2} \text{ for all } n\).
4. Find the Maclaurin series (the Taylor series at $c = 0$) for the function.

$$f(x) = \frac{x^2}{2 + x^3}$$

You need to find a formula for the general term. Hint: Do not take derivatives.

Use $$\frac{1}{1 - x} = 1 + x + x^2 + x^3 + \cdots = \sum_{n=0}^{\infty} x^n$$ (geometric series)

Then $$\frac{x^2}{2 + x^3} = \left( \frac{x^2}{2} \right) \cdot \frac{1}{1 + \frac{x^3}{2}} = \frac{x^2}{2} \left( 1 - \frac{x^3}{2} + \frac{x^6}{4} - \frac{x^9}{8} + \cdots \right)$$

$$= \frac{x^2}{2} \sum_{n=0}^{\infty} \left( -\frac{x^3}{2} \right)^n = \frac{x^2}{2} \sum_{n=0}^{\infty} \frac{(-1)^n}{2^n} x^{3n}$$

$$= \sum_{n=0}^{\infty} \frac{(-1)^n}{2^{n+1}} x^{3n+2}$$
5. A curve is given by the parametrization.

\[ x = 4 \sin \left( \frac{\pi}{2} t \right) \quad \text{and} \quad y = t^2 \]

(a) Graph the curve for \( 0 \leq t \leq 4 \) by plotting points when \( t = 0, 1, 2, 3, 4 \).

\[
\begin{array}{c|c|c}
 t & x & y \\
\hline
 0 & 0 & 0 \\
 1 & 4 & 1 \\
 2 & 0 & 4 \\
 3 & -4 & 9 \\
 4 & 0 & 16 \\
\end{array}
\]

(b) Find the slope \( \frac{dy}{dx} \) when \( t = 2 \).

\[
\frac{dy}{dx} = \frac{\frac{dy}{dt}}{\frac{dx}{dt}}
\]

\[
= \frac{2t}{2\pi \cos \left( \frac{\pi}{2} t \right)} = \frac{t}{\pi \cos \left( \frac{\pi}{2} t \right)}.
\]

If \( t = 2 \) then

\[
y'(2) = \frac{2}{\pi \cos(\pi)} = \frac{-2}{\pi}.
\]
6. Use the integral test to determine whether the series converges or diverges.

\[ \sum_{n=2}^{\infty} \frac{1}{n \ln(n)} \]

Let \( f(x) = \frac{1}{x \ln(x)} > 0 \) if \( x > 1 \).

Let \( \frac{d}{dx} f(x) = \frac{-(1+\ln(x))}{(x \ln(x))^2} < 0 \) if \( x > \frac{1}{e} \).

\[ \lim_{R \to \infty} \int_{2}^{R} \frac{dx}{x \ln(x)} = \lim_{R \to \infty} \int_{2}^{R} \frac{du}{u} = \ln|u| + C \]

Let \( u = \ln(x) \) then \( du = \frac{1}{x} \, dx \),
\[ \int \frac{dx}{x \ln(x)} = \int \frac{du}{u} = \ln|\ln(x)| + C \]

\[ \lim_{R \to \infty} \int_{2}^{R} \frac{dx}{x \ln(x)} = \lim_{R \to \infty} \left[ \ln|\ln(x)| \right]_{2}^{R} \]
\[ = \lim_{R \to \infty} \left[ \ln|\ln(R)| - \ln(\ln(2)) \right] \]
\[ = \infty \]

Thus \( \sum_{n=2}^{\infty} \frac{1}{n \ln(n)} \) diverges.
