Section 1.9 “Synopsis of the book”. A multicategory $C$ is called \textit{closed} if (citation added): A multicategory $C$ is called \textit{closed} (cf. [Lam69, p. 106]) if

8 lines before Proposition 1.19: ‘More explicitly, the component of degree 1 of the graded $k$-module $A_\infty(n)$’ has to be ‘More explicitly, the component of degree 0 of the graded $k$-module $A_\infty(n)$’

Above Proposition 3.6: The injection Par $\lambda^\phi_{\mathcal{P}\mathcal{M}\mathcal{Q}}$ is not split in general.

Before Definition 4.7 of a closed multicategory: The definition of a closed Set-multicategory was first given by Joachim Lambek [Lam69, p. 106] in an equivalent form to the following /Definition 4.7/.

Equation (10.28.2): Both $B$ should be $A$.
